

## Challenges

- Planner had to locate chemical reports back at the office in a filing cabinet.
- Compliance officers had to call the State Fire Marshal's Office to know if a hotel or chemical facility had a current permit.
- Planners spent hundreds of hours creating a target hazard book for hundreds of the sites which included preplanning of SDSs and site drawing.
- CAD technicians spent many hours updating site location and chemical quantities in their Computer Aided Dispatch System to aid firefighters during a response call.
- The Hazmat Responder had to depend on the information that chemical site owners shared about chemical inventory onsite during the pressures of an emergency.

## Gains after Implementing Hazconnect

- **Fire Departments, Responders, and Hazmat teams can pull up real-time chemical quantities, first aid guides, and risks anytime, anywhere with a simple internet browser.**
- **Emergency Contacts are easy to find and track.**
- **Inspectors use the system to conduct their hotel inspections, a primary portion of Hazmat duties. Inspectors can immediately compare reported chemical quantities and inspected amounts and set up follow-ups.**
- **Re-inspections are easier to do because inspectors can check whether an updated permit has been issued before traveling back onsite.**
- **Compliance Officers can pull up site permit status for each Las Vegas hotel and other chemical sites.**
